Entering % Active

The following is an example scenario:

> "When creating a new Product File, if I have a 50% actives product like Belclene 200 (PMA) and have a 100% AA/AMPs and want to end up with a product that is 22% of PMA and 22% AA/AMPs, what percentages would I put in my formulary percent table to give me these percentages?"

All French Creek inhibitor files are on a 100% active solids basis. For example:

For the French Creek Product File enter:
Belclene 200: 22%
AA-AMPS: 22%

Your batch file for production would be:
Belcelene 200 (from their drum or bulk): 44%
AA-AMPs (from Acumer 200 if 50% soilids): 44%
